Subtotal \$1,500.00

Total \$1,500.00

Estimated delivery: ~20 working days

ASSUMPTIONS

- Assuming the client will provide all high-quality product photography, cake descriptions, and pricing prior to the start of development.
- Assuming the bakery uses an existing domain name and standard managed hosting, with no additional enterprise infrastructure costs required.
- Assuming local pickup scheduling relies on predefined time windows rather than complex, real-time production capacity calculations per individual recipe.
- Assuming payment processing will be handled via a standard provider like Stripe or Mollie, and the client has the necessary business registration to open a merchant account.
- Assuming the 6-week timeline includes adequate buffer for client feedback and content population, with active development taking approximately 4 weeks.
